

Can a 70dB optical power meter be used

Mechanical drawing

Overview

Most meters provide accuracy within ± 0.1 . Record the measurement and check that it falls within the expected power range for your optical networks. Note: Calibration is essential. Power meters are calibrated to read in dB referenced to one milliwatt of optical power. widely used in the test of LAN, WAN, metropolitan network, CATV net or long-distance fiber net and other situations. ST800 Optical Power Meter ST800 optical power meter is basic type meter. Power measurement range (+10 ~ -70 dBm) with. While optical power meters are the primary power measurement instrument, optical loss test sets (OLTSS) and optical time domain reflectometers (OTDRs) also measure power in testing loss. Optical power is based on the heating power. To use a power meter for fiber optic testing, always clean connectors first with lint-free wipes or click-to-clean tools. Compatible with FC / SC connectors. Wavelength range from 800 nm to 1700 nm. 4 digit LCD display, backlit for night viewing.
