

Certified Flame Retardant Network Racks

Overview

In this guide, we'll explore what NEBS means, what certified racks must endure, how they differ from standard enclosures, and how to choose the right compliant server racks for your network. NEBS (Network Equipment-Building System) is a set of standards originally developed by Bell Labs to ensure IT basic protection as a separate fire compartment! fire protection from inside and outside! This IT server cabinet fireproof is the solution for highest fire and IT security requirements. As a complete, compact data center with all infrastructures such as air conditioning, UPS, monitoring, etc. Fire resistant separations can be created within existing IT rooms through up to 47 units high, flexible enclosures of racks. For this requirement, we have designed different models that meet the relevant DIN and EN standards for.
