

Construction site primary power distribution box double-sided

Overview

Featuring a space-saving double-sided design, this modular power distribution enclosure is built from galvanized sheet steel, rated to 1600A, and compliant with BS EN 61439-4 to ensure safety, durability, and performance in demanding environments. Primary distribution systems consist of feeders that deliver power from distribution substations to distribution transformers. At this. From the transformer's low-voltage side (0. 4kV), power is distributed to a main distribution panel (primary distribution box). These boxes feature bottom entry and exit cables, front-opening doors, and main busbars connected with copper strips for optimal contact.
