

Data Center PDU IP67 Price

AI Overview

IP67-rated data center PDUs typically range from \$800 to \$2,500 depending on amperage, phase, and features. Price Overview IP67 PDUs are designed for dustproof and waterproof operation, making them suitable for harsh or mobile data center environments. Prices vary based on:

- Input current and phase: Single-phase units (20–30A) are generally less expensive, while three-phase units (up to 63A) cost more.
- Outlet configuration: More outlets or mixed types (C13, C19, NEMA) increase cost.
- Monitoring and control features: Metered, monitored, or intelligent PDUs with remote management capabilities add to the price. For example, a 3-phase, 63A IP67 PDU suitable for mobile or stage lighting/data center use is typically priced in the \$1,200–\$2,500 range, depending on vendor and shipping.

Lower-capacity IP67 PDUs (20–30A, single-phase) can be found around \$800–\$1,200. Additional Considerations

- Warranty and support: Many PDUs come with 1–2 year warranties; extended coverage may increase cost.
- Environmental monitoring: Some PDUs include ports for temperature and humidity sensors, which can affect pricing.
- Vendor and region: Prices vary by supplier and shipping location; Amazon, Comms Express, and specialized industrial suppliers may offer different rates.

For the most accurate pricing, it is recommended to check vendor websites or request a quote for the specific IP67 PDU model that matches your amperage, phase, and outlet requirements.
