

Distribution box waterproof for both residential and outdoor use

AI Overview

IP65-IP68 waterproof distribution boxes made from durable ABS or polycarbonate are ideal for both residential and outdoor applications. Key Features

Ingress Protection (IP Rating): Look for boxes rated IP65 or higher, which ensures protection against dust, rain, and splashing water, making them suitable for outdoor installations. Some models even offer IP66 or IP68 for harsher environments.

Material and Durability: High-quality ABS or polycarbonate housings provide impact resistance, UV stability, and flame retardancy, ensuring long-term performance in sun-exposed or industrial settings. These materials are lightweight yet strong, suitable for wall or panel mounting.

Design and Installation: Many boxes feature DIN rail compatibility, modular layouts, and transparent covers for easy inspection of internal components. Compact and larger options are available, allowing flexibility for residential wiring, solar systems, or outdoor lighting circuits.

Applications: Waterproof distribution boxes are versatile and can be used for:

- Residential power distribution and AC/DC breaker protection
- Outdoor lighting and control systems
- Solar photovoltaic (PV) combiner boxes
- Industrial automation and HVAC panels
- Marine or offshore electrical installations

Additional Features: Many models include double-sealed silicone gaskets, secure locking mechanisms, and multiple mounting holes for hassle-free installation. Some boxes also offer aesthetic designs with clear covers for easy monitoring of internal devices.

Recommended Series

- AT Series:** Compact, value-focused, ideal for tight spaces and simple cabling.
- HT Series:** Larger internal space, cleaner routing, supports small DIN rail configurations, suitable for more complex installations.
- TSM Series:** Modern design, flame-retardant ABS/PC, IP65 rated, suitable for both residential and outdoor use with easy DIN rail installation.
