

How large a distribution box does a household need

Overview

A small apartment or a house with minimal electrical needs may suffice with a smaller distribution box (4 to 6 circuits), while larger homes with multiple electrical appliances, air conditioners, heating systems, or home theaters may need a larger unit (8 to 12 circuits or more). It takes the main electrical service from the utility and divides it into individual circuits that run throughout the house. The panel's “size” refers to its maximum current capacity. A well-chosen distribution box ensures the safety and efficiency of your household electrical system. A good choice has enough spare ways, suitable RCD or RCBO protection, surge protection where needed, and an enclosure approved for the local installation standard. Make sure it fits your needs now and later.
