

Huijue rack-mounted fiber optic cable fixing position

Overview

There are horizontal and vertical plates for fixing cables in the rack cabinet, called breakout plates. This is the point where the sheath, central strength member, Kevlar, and tubes are secured, after which the cable sheath is removed, and the PVC tubes are directed. Bottom installation: Select a proper installation position in the equipment room and drill four holes in the floor according to the dimensions shown in the manual. Fix the rack to the ground with expansion bolts. It ensures fiber management is structured, minimizes signal loss, and provides. An optical Distribution Frame (ODF) or patch panel is the starting point for optical cables, most commonly found in rack cabinets in Head End (HE)/Central Office (CO)/Point of Presence (POP)/Data Centre (DC) or smaller cabinets or enclosures. The enclosure may be configured with ModLink Cassettes, Fiber/Adapters, maintenance and fiber protection. It involves structured power distribution, controlled airflow, proper fiber cable management, and precise modular chassis integration to ensure long-term network stability.
