

Multimode fiber optic cable for sale

AI Overview

Multimode fiber optic cables are available from multiple suppliers, offering various core sizes, strand counts, and performance grades suitable for short- to medium-distance high-speed networking applications.

Key Considerations

Fiber Type and Core Size: Multimode fiber cables typically come in OM1 (62.5/125 μm), OM3 (50/125 μm), OM4 (50/125 μm), and OM5 (50/125 μm) variants. OM1 is suitable for legacy systems, while OM3, OM4, and OM5 support higher bandwidths and speeds, including 10G, 40G, 100G, and even 400G networks.

Distance and Performance: Multimode fiber is ideal for shorter distances compared to singlemode fiber. For example, OM3 and OM4 cables are optimized for high-speed data transmission in data centers and enterprise networks, whereas OM1 is better for less demanding environments.

Cable Configuration: Options include duplex or multi-strand cables, indoor, outdoor, gel-filled, armored, and aerial types. These configurations ensure durability and suitability for different installation environments.

Connectors and Accessories: Many suppliers provide cables with various connector types and additional accessories such as dust caps, network couplers, and fiber optic converters to integrate with Ethernet or other network systems.
