

New Irish Fiber Optic Endface Electric Cleaning Pen

AI Overview

The New Irish Fiber Optic Endface Electric Cleaning Pen is a high-speed, efficient tool designed to clean fiber optic connectors and endfaces, removing stubborn contaminants and maintaining optimal network performance.

Key Features

- Electric Cleaning Mechanism:** The pen uses a high-speed rotation system to remove anhydrous stains and debris from fiber endfaces, achieving a cleaning effect similar to polishing, which is particularly effective for connectors that have not been cleaned for a long time.
- Compatibility:** It supports multiple connector types and sizes, including 1.0mm (pins and jacks), 1.25mm (LC, MU UPC/APC), and 2.5mm (FC, SC, ST UPC/APC), making it versatile for on-site optical network maintenance.
- Some models also support MPO and MTP connectors.**
- Durability and Maintenance:** The pen features replaceable cleaning rods with long service lives: 30 cleanings for 1.0mm rods, 50 for 1.25mm rods, and 100 for 2.5mm rods. Replacement is quick and easy, allowing continuous use without downtime.
- Ease of Use:** Many models are designed with a one-button operation, allowing fast and effortless cleaning. The pen's ergonomic design resembles a standard writing pen, making it convenient for field technicians.
- Material and Safety:** Constructed with antistatic resin and dust-cleaning filaments, the pen prevents secondary contamination and ensures safe handling during repeated use.
- Cleaning Efficiency:** The pen achieves up to 99% cleaning effectiveness, ensuring optimal signal transmission and reducing network loss.
- Environmental Resistance:** It operates reliably in temperatures from -10°C to 40°C and can be stored between -20°C and 40°C, suitable for various field conditions.

Applications

The pen is ideal for cleaning and maintaining optical links in FTTN, FTTC, and FTTB deployments, supporting high-speed broadband in urban, residential, and commercial environments.
