

North Macedonia New Material Cable Tray Specifications

AI Overview

Cable trays in North Macedonia are commonly made from PVC, mild steel, stainless steel, galvanized steel, and aluminum, each offering specific benefits for industrial, commercial, and residential applications.

Common Cable Tray Materials

- 1. PVC (Polyvinyl Chloride) Cable Trays** PVC trays are lightweight, corrosion-resistant, and ideal for environments where moisture or chemical exposure is a concern. They are widely used in residential and commercial installations due to their non-conductive properties and ease of installation.
- 2. Mild Steel Cable Trays** Mild steel trays provide strong mechanical support and are suitable for heavy-duty industrial applications. They are often coated or painted to resist corrosion and are available in perforated or ladder designs for better ventilation and cable management.
- 3. Stainless Steel Cable Trays** Stainless steel trays offer excellent corrosion resistance and durability, making them suitable for harsh environments, including chemical plants, coastal areas, and food processing facilities. They are highly reliable for long-term installations.
- 4. Galvanized Steel Cable Trays** Hot-dip galvanized trays are popular for their robust construction and resistance to adverse climatic conditions. They are extensively used in electrical, automotive, and construction industries in North Macedonia and are valued for their longevity and structural strength.
- 5. Aluminum Cable Trays** Aluminum trays are lightweight, corrosion-resistant, and easy to handle. They are commonly used in industrial and commercial sectors where weight reduction and ease of installation are important. Ladder-type aluminum trays are particularly favored for cable routing in large facilities.

Additional Considerations

Perforated vs Ladder vs Solid Bottom: Perforated trays allow ventilation and heat dissipation, ladder trays support heavy cables with minimal sag, and solid-bottom trays protect cables...
