

Offshore High-Speed Optical Connectivity

1.6T

Overview

Each module integrates eight electrical and eight optical channels operating at 212.5 Gbps PAM4 per lane, achieving a total bandwidth of 1.6T. Optical modules are the major module types involved, and the application scenarios driving adoption. The rise of massive GPU clusters, high-performance computing environments, and geographically distributed. Over the next 1-2 years, 1.6T networking is becoming a reality as AI clusters and data centers continue to scale. Despite strong demand, the optical communication supply chain still faces constraints, particularly in: These challenges are accelerating vertical integration. With the rapid rise of large AI models and hyperscale data centers, 1.6T networking is becoming a reality as AI clusters and data centers continue to scale.
