

Price of upper and lower electrical distribution box panels

AI Overview

The cost of a complete electrical distribution box panel ranges from approximately \$200 to \$1,250 for the panel itself, with total installed costs typically between \$1,200 and \$4,500 depending on amperage, circuits, and installation complexity.

Retail Panel Prices

Residential panels: Single-phase panels for homes typically cost \$40 to \$1,250, depending on amperage and number of circuits.

Common options:

- 100–125A indoor panels: \$37–\$120
- 200A panels with 30–40 spaces: \$160–\$380
- Outdoor or weatherproof panels: \$200–\$400

Brands: Square D, Eaton, Siemens, GE, and ABB are widely available at Home Depot, Lowe's, and Ace Hardware.

Installed Costs

Typical replacement: \$1,200–\$2,500 for a 100–200A panel, including labor, materials, and permits.

High-end upgrades: 200A outdoor panels with meter socket replacement or complex wiring can reach \$3,000–\$6,000.

Labor: Electricians charge \$75–\$150 per hour, with installation taking 4–12 hours depending on complexity.

Permits and inspections: \$100–\$600, varying by municipality.

Factors Affecting Price

Amperage: Higher amperage panels (200–400A) cost more due to larger enclosures and additional breakers.

Number of circuits: More circuits increase material costs and labor time.

Indoor vs. outdoor installation: Outdoor panels require weatherproof enclosures, raising costs.

Wiring complexity: Long conduit runs, rerouting, or rewiring older homes can add \$500–\$2,000.

Regional labor rates: Urban areas tend to be 10–25% higher than rural areas.

Additional features: Surge protection, GFCI breakers, or smart monitoring panels increase upfront costs.

Budgeting Tips

- Compare quotes from licensed electricians and request itemized estimates.
- Consider combining panel replacement with other electrical upgrades to reduce labor costs.
- Check for local rebates or incentives for safety or energy-efficient upgrades.
- Plan for potential hidden costs.
