

Qatar Network Cable Tray Installation

AI Overview

Cable tray installation in Qatar requires adherence to local and international standards, using galvanized supports, proper spacing, secure fixings, and careful routing to ensure safety and functionality.

Materials and Tray Types Cable trays in Qatar are typically made from pre-galvanized steel, with options for hot-dip galvanization for enhanced corrosion protection. Trays can be solid, perforated, or ladder type, depending on ventilation needs and cable load. Solid trays provide robust support, while perforated trays allow airflow to cool cables. Ladder trays are preferred for heavy or high-volume cabling and long spans between supports.

Supports and Fixings Suspended trays use hanger rods, nuts, locking washers, and support channels, all with a galvanized finish. Wall-mounted trays are installed using pre-fabricated flanges or GI channels, with support intervals determined by cable size, number, and project specifications. Minimum spacing between the tray and structure is 40mm, and additional supports are required at direction changes or cable drop points. Dome-headed bolts, nuts, and washers should match the tray finish for connections between trays. Earth continuity conductors must be installed across gaps and bolted connections to maintain grounding.

Installation Procedure

Inspection and Preparation: Ensure trays, fittings, and supports are free from dirt, oil, or corrosion. Inspect for physical damage and compliance with approved submittals.

Documentation: Prepare a Material Inspection Request (MIR) and ensure all shop drawings, method statements, and ITPs are available.

Safety and Access: Provide safe access, clear obstructions, and conduct safety briefings before starting work.

Mounting and Alignment: Install supports at specified intervals, secure trays with appropriate fixings, and maintain proper alignment. Avoid leaving extended rods or unsecured ends.

Cable Securing: Use cleats or metal straps for bunched cables or single cables larger than 25 sq mm. Ensure no crossovers and neat routing.
