

The fiber optic cable at home is not connected

Overview

Many fiber internet problems come from dirty connectors or loose plugs, not major faults. Power cycling or restarting your ONT (Optical Network Terminal) often resolves simple troubleshooting internet issues. First, check the basics—look for power issues on your optical network terminal and inspect all cables for visible damage. Before diving into solutions, it's crucial to understand what an optical cable is and how it works. These cables are made of glass or plastic fibers that transmit data as light signals. The most common problems usually fall into four categories: Physical Layer: Transmission Performance: Equipment and Module Failures:. In this guide, we'll walk you through how to connect a fiber optic cable to a router safely and efficiently.
