

US Export Price of Low-Temperature Resistant Communication Power Systems CIF

AI Overview

The CIF export price for low-temperature resistant communication power systems is not publicly listed directly, but it can be obtained through U.S. trade databases using the appropriate HTS codes.

How to Access CIF Export Prices

USITC DataWeb: The U.S. International Trade Commission's DataWeb provides official U.S. export statistics, including value, quantity, and partner country data. Users can query by product description or Harmonized Tariff Schedule (HTS) codes to extract CIF values for specific products. You can download the data in spreadsheet format for analysis.

Harmonized Tariff Schedule (HTS): Identify the correct HTS code for low-temperature resistant communication power systems. The HTS provides detailed product classifications, which are essential for accurate trade data queries. Once the HTS code is known, you can filter export data by year, country, and value.

UN Comtrade Database: For global trade comparisons, the UN Comtrade database aggregates export and import statistics from over 200 countries. It allows extraction of CIF values for U.S. exports to specific countries, which can help estimate market prices.

Export Control Considerations: Some communication power systems may be subject to export controls under the Commerce Control List (CCL). While this does not directly affect CIF pricing, it may influence licensing requirements and reporting.

Steps to Obtain CIF Data

Determine the HTS code for your product (e.g., communication power systems designed for low temperatures).

Access USITC DataWeb and select "Exports" as the measure. Input the HTS code, select the relevant year(s), and choose "CIF value" as the measure. Download the results for a...
