

Warranty period for secondary distribution boxes

AI Overview

Warranty periods for secondary distribution boxes typically range from 12 months to 5 years, depending on the manufacturer and local regulations. Standard Manufacturer Warranties Atlas Copco provides a 12+1 month warranty from the date of dispatch for distribution boxes, covering defects in materials and workmanship, but excluding normal wear and tear or damage caused by improper maintenance or unauthorized service. Schneider Electric Acti9 Isobar P distribution boards come with a 5-year warranty, covering defects due to faulty materials or workmanship, provided the installation and maintenance are performed according to manufacturer guidelines and no unauthorized modifications are made. Legal and Statutory Guarantees In the European Union, consumers are entitled to a minimum 2-year legal guarantee for goods, including distribution boxes, protecting against faulty products or items that do not function as advertised. This legal guarantee is separate from any commercial warranty offered by the manufacturer. Some suppliers may offer extended warranties or preventive maintenance contracts, which can lengthen coverage beyond the standard period, often including additional services like inspections or repairs. Key Considerations Warranty coverage usually requires that the product is installed and maintained according to the manufacturer's instructions. Damage caused by unauthorized modifications, improper use, or servicing by non-certified personnel is typically not covered. Always check whether the warranty includes parts, labor, or both, and whether it is conditional on registration or activation with the manufacturer. In summary, the warranty for secondary distribution boxes varies by manufacturer and region, generally ranging from 1 year to 5 years, with statutory guarantees providing additional protection in many jurisdictions. Ensuring proper in...
