

What is the interface number of the unit fiber optic splice tray

AI Overview

Fiber optic splice trays typically do not have a universal interface number; identification is usually by manufacturer part number or tray designation. Fiber optic splice trays are identified primarily by manufacturer part numbers rather than a standardized interface number. For example: Molex 24-Fiber Universal Splice Tray: Single tray part number AFR-00822, dual tray configuration AFR-00823, designed to fit into a 1U utility fiber enclosure (p/n RFR-00326). Schneider Electric 1U Fusion Splice Tray Kit: Delivered as a complete unit with accessories, capable of stacking up to three trays in a 1U 19-inch HD fiber panel. Corning 24-Fiber Splice Tray: Supports 24 single fusion splices, 72 mass fusion splices, or 6 Fi rlok® splices per tray, with clear cover for easy inspection. WeUnion 12-Core Fiber Optic Splice Tray: Supports multiple fiber connection types (FC/SC/DLC) and is suitable for wall or rack installation. Tray Interface and Mounting The "interface" in practical terms refers to how the tray connects to the fiber panel or enclosure: Rack-mounted trays: Standard 19-inch panels, often 1U height, with slots for stacking multiple trays. Wall-mounted trays: Smaller enclosures or boxes, designed for compact installations. Fiber management features: Integrated half-spools, pivotal splice holders, and heat shrink tube slots ensure proper fiber routing and protection. Key Takeaway If you are looking for an interface number, it is best to reference the manufacturer part number of the splice tray, as this serves as the unique identifier for installation, ordering, and documentation purposes. Standardized interface numbers are not commonly used across different manufacturers, and compatibility is determined by tray dimensions, fiber capacity, and enclosure type.
