

What quota should be applied to fiber optic cable lead-in

Overview

While 40% is a good rule of thumb for pathways to meet present and future cable installation requirements, most telecom professionals aim for a maximum fill ratio of 70 to 80% for fiber innerduct. Premise innerduct is a flexible, non-metallic, corrugated raceway that has long been an essential conduit system for protecting fiber optic cables installed throughout telecommunications spaces and pathways. It can help isolate fiber to prevent damage from other cables or trades working in those. However there are some general rules that should be followed: Follow the cable manufacturer's recommendations. The contractor must be experienced in fiber optic installations of the type involved and should be able. Placing fiber optic cable inside a conduit is a necessary investment because the protective tubing addresses three major concerns inherent to cable deployment. Conduit also facilitates cable management and ease of maintenance.
